3.6	Ethical behaviour and responsible Use	4

1. Purpose

The purpose of this policy is to provide stable technology softwares that appropriately address business needs. A lack of standards regarding what software can be installed on organisational devices, including desktop and laptop computers, can hinder provision of service. Controlling organisational software is not only a best practice, but also required for legal compliance. The Software Policy articulates what software is permitted on enterprise devices and who authorises and carries out the installation task.

2. Intent

- This policy applies to all Mallow Technologies users and covers software installation on Mallow Technologies-owned computers.
- Deviations from existing standards must be approved by the Mallow Technologies IT Team via the usual Endorsement process.

3. Policy statement

3.1 Ownership

Mallow Technologies owns every IT software purchased on behalf of Mallow Technologies by any of the employees. It is prohibited to install Mallow Technologies licensed software on non-company computers.

3.2 Categories of approved softwares

We have listed the allowed applications by category that are not pre-installed.

These are software packages permitted for all users. No approval is required for installation. These packages can install their dependencies as well, which are also included in the approved list.

- HomeBrew
- Postgres
- Mysql
- Python
- Node
- RVM
- Rbenv
- NVM
- Rar extractor

3.3 Prohibited software

It is expressly forbidden to distribute or use computer programs for reasons such as scanning networks, intercepting information or password capture unless specific authority is obtained from the Mallow Technologies IT Team.

Mallow Technologies users must comply with copyright laws and respect the intellectual property rights of others. It is therefore expressly forbidden for users to have possession of unlicensed software on Mallow Technologies computers. Users of unauthorised copies of software will be disciplined as appropriate under the circumstances.

3.4 Purchase of software

To purchase non-standard software, email approval must be obtained as per Endorsement Process.

3.5 Accountability

Users must not duplicate licensed software for use either on premises or elsewhere unless expressly authorised to do so. Users may not give software to third parties, including contractors. Users may use software on networks or on multiple machines only in accordance with applicable license agreements. Software must only be installed, modified, un-installed or deleted in accordance with agreed change management procedures, and must only be undertaken by authorised IT personnel.

3.6 Ethical behaviour and responsible use

Mallow Technologies provides software to employees to facilitate business operations and assist in performing daily work activities. Personal or Commercial use of Mallow Technologies software is strictly prohibited. Users may be subject to disciplinary action if found using software contrary to this policy.
