

Timesheet Overview

To track the time spent on projects or tasks, Employees are expected to enter their working hours with details in the timesheet application by the closure of business daily. The ideal case would be to enter the timesheet twice a day (i.e., at the end of every session). The Timesheet entered must be verified, approved, authorized and marked billable by the reporting persons within 11 am of the next day.

The timesheet authorization of a week must be completed by the reporting persons within 1 pm of the following Monday, if any missed during the previous week.

Brief of the few terms used in Timesheet:

- Approved - The hours spent on tasks that are authentic to be accomplished during working hours should be approved.
- Efficiency - The hours spent efficiently on a task should be marked as efficiency.
- Productivity - The efficient hours spent on client deliverables should be marked as productivity.

Hubble Overview

Hubble in short is an internal HRM tool designed to streamline and enhance the employee experience within our organization. It serves as a centralized hub for various functions and features, enabling employees to conveniently access important information, log their worked hours and manage their leaves, etc.

Below listed are some features within Hubble which will be used by you:

- Timesheet Management
- Leave Management

Please have a look at the below given documentation & demo video link, to make your timesheet entry easier.
